

Get started recycling!

Step 1: Pick two separate bins, label both (one for Trash and the other for Recycling) and line only the bin for trash with plastic. Never use a plastic bag in your recycling bin.

Step 2: Wash out any liquids and/or remove contaminants from recycled material. This could be food residue or non-recyclable items that are part of packaging. If contaminants are not removed, the recycling process could be delayed or your items may be rejected and put into landfill.

Step 3: Make it a habit and start recycling. For tips and reminders about recycling, download and print additional resources from our website greenworks.com. Keep these resources handy and visible so all members of your family or office can learn how to recycle better.

Step 4: When household or office bins are full of loose recycling, dump the contents of that bin into a curbside bin and bring it down to the street on your recycling day. For days and times in your area, please contact your hauler. Need a Hauler? Contact JRM Hauling and Recycling at (978)-854-6852
